## Modern Chemistry in Review

Principles of Chemistry uses a mastery-learning paradigm designed to bring students to a excellent grasp of concepts and skills. The author's conversational style is a favorite with students, and combined with a special skill for lucidity and detail, this text is what has been sorely missing from education. Students also appreciate the smaller profile and lighter weight of our books--something everyone notices immediately. This is possible because of the text covers an amount that can reasonably be covered in one year, rather than being stuffed with unnecessary chapters. The history of modern chemistry, mathematics and technical communication is emphasized throughout to effect the integration of chemistry with other subjects. Integration preserves a course from feeling compartmentalized and not relevant to other subjects. That's certainly not how the real world is. Real chemists use math and writing skills, and their field is greatly enhanced by their knowledge of the lineage of great scientists upon whose shoulders they stand. All Centripetal Press texts are rigorously reviewed and vetted by professional scientists. This text is recommended for students with a minimum math competency of Algebra II due to the appearance of logarithmic calculation when learning about pH values. Otherwise, math skills only involve basic formula solutions. Companion Resources for General Chemistry Principles of Chemistry: Solutions Manual for worked-out answers to all calculation problems. Principles of Chemistry: Resource CD includes chapter tests, answer keys and other resources. Chemistry Experiments for High School Students contains complete instructions and materials lists for 20 experiments. Chemistry Experiments for High School at Home for environments that do not have access to a laboratory. The Student Lab Report Handbook, a concise guide to writing premier lab reports for high school and undergraduate studies.

Comprehensive Inorganic Chemistry II, Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, Comprehensive Inorganic Chemistry II includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience. The work is designed to follow on, with a different viewpoint and format, from our 1973 work, Comprehensive Inorganic Chemistry, edited by Bailar, Emeléus, Nyholm, and Trotman-Dickenson, which has received over 2,000 citations. The new work will also complement other recent Elsevier works in this area, Comprehensive Coordination Chemistry and Comprehensive Organometallic Chemistry, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable, long-standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts, under the guidance of the Volume Editors and the Editors-in-Chief. The articles are written at a level that allows undergraduate students to understand the material, while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources (and the original work), but instead concentrate on applications of the elements and their compounds. Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields, such as: biological inorganic chemistry, materials chemistry, solid state chemistry and nanoscience Inorganic chemistry is rapidly developing, which brings about the need for a reference resource such as this that summarise recent developments and simultaneously provide background information Forms the new definitive source for researchers interested in elements and their applications; completely replacing the highly cited first edition, which published in 1973
